FACHADA B

Fachadas

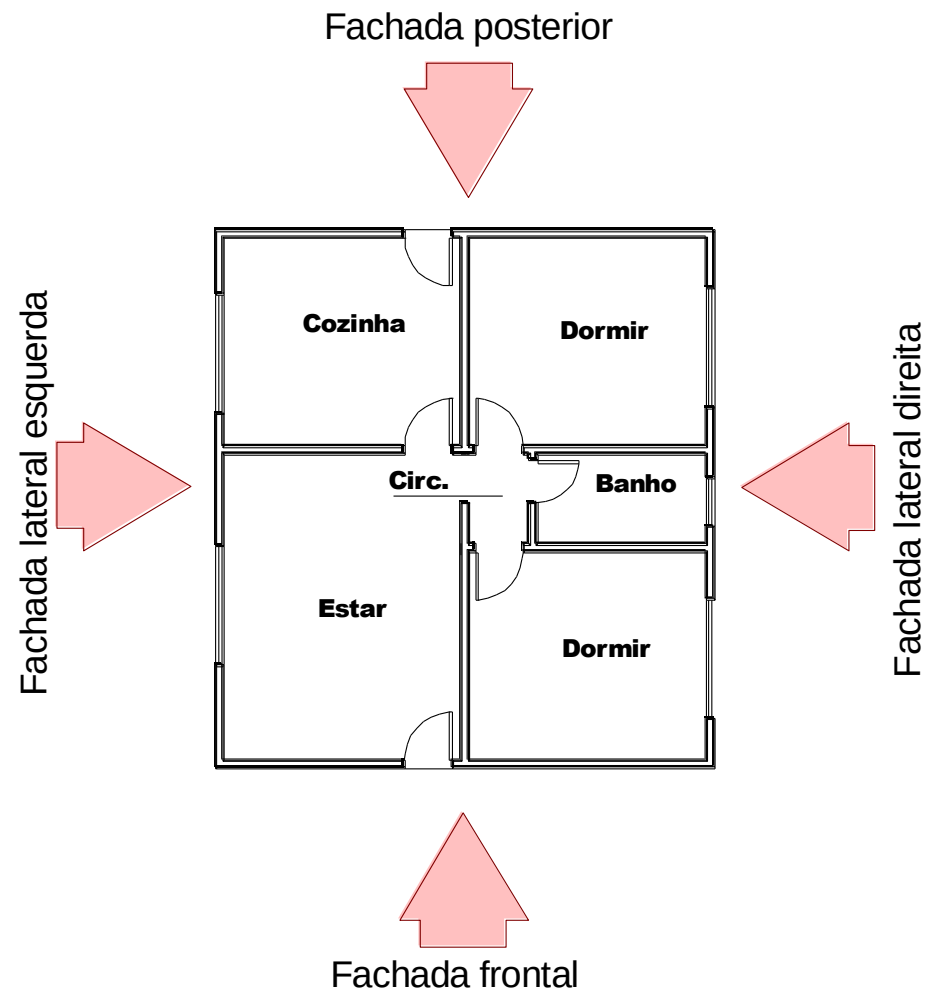

Fachadas

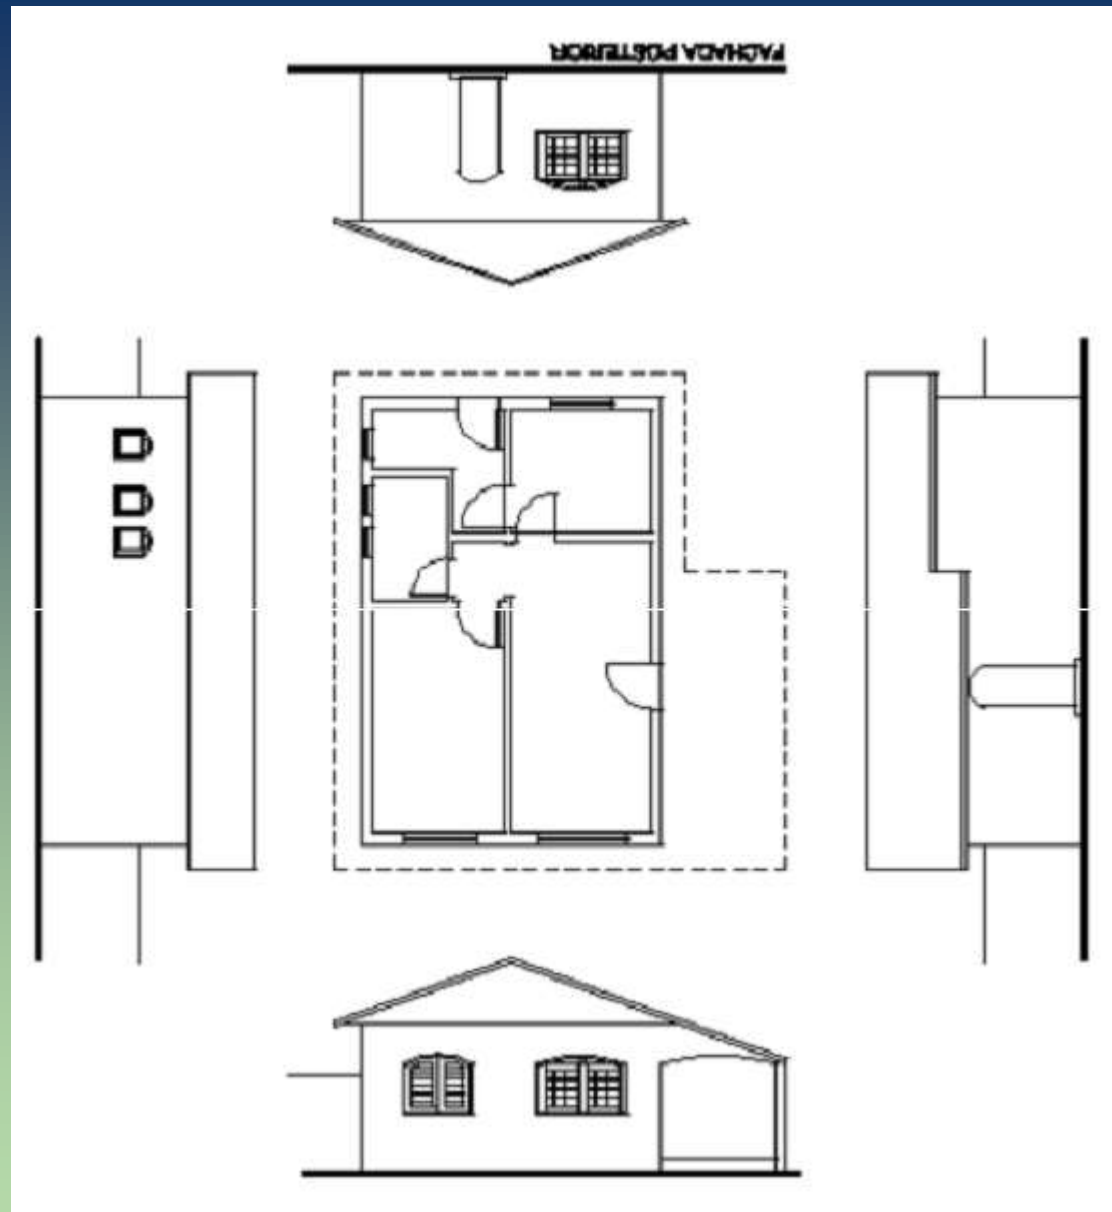

Fachada: designação de cada face de um edifício. Frontaria ou frontispício é geralmente o nome que se dá à fachada da frente, a que dá para a rua. Na linguagem mais comum, constitui apenas, esse caso, a “fachada principal”. As outras serão denominadas de fachada posterior, ou fachada lateral.

Fachadas

Fachadas

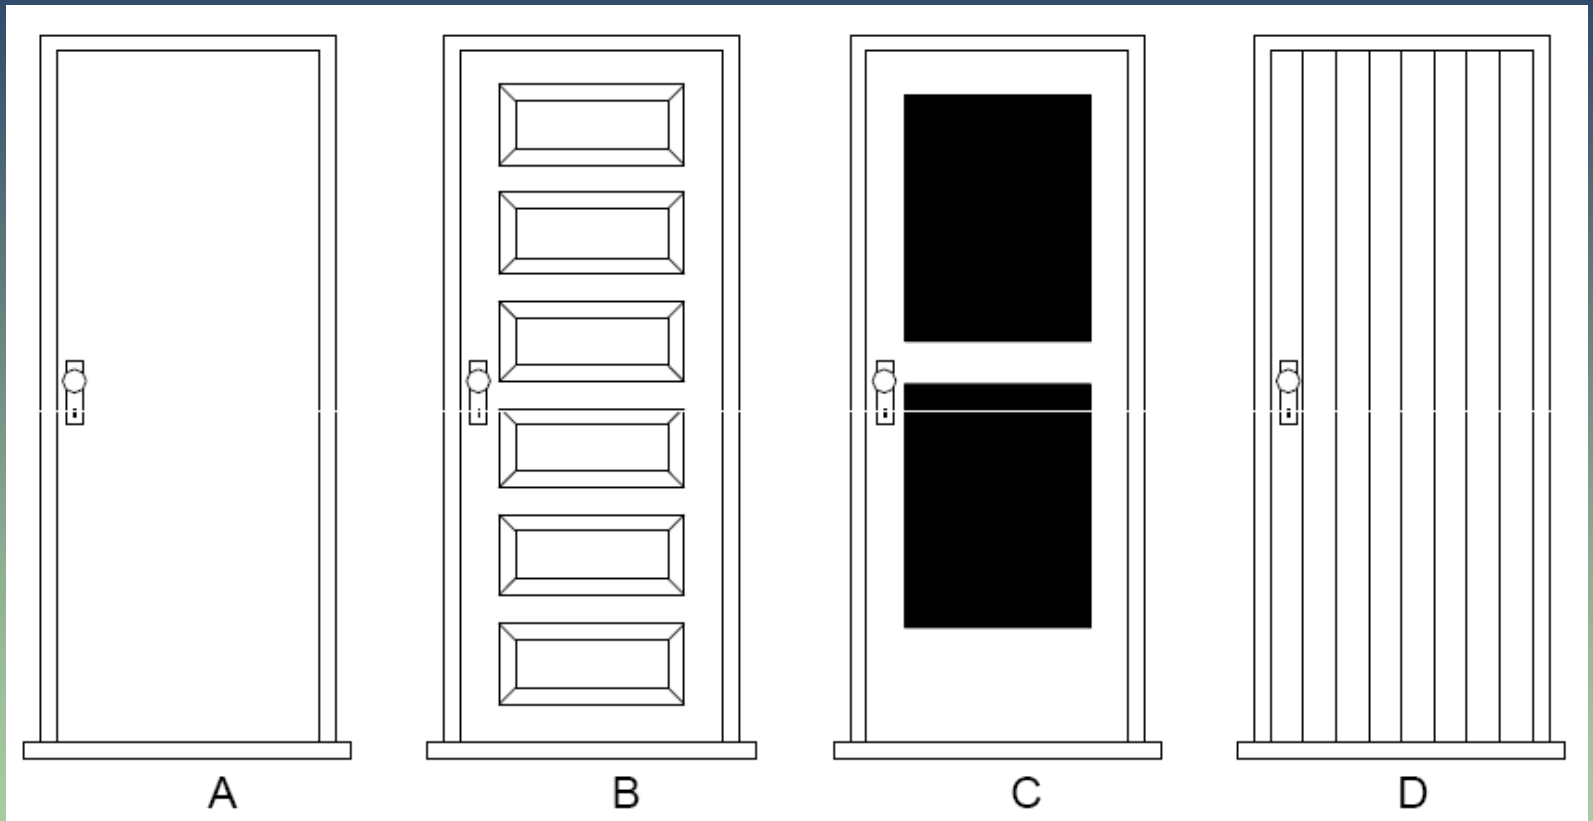

Fachadas

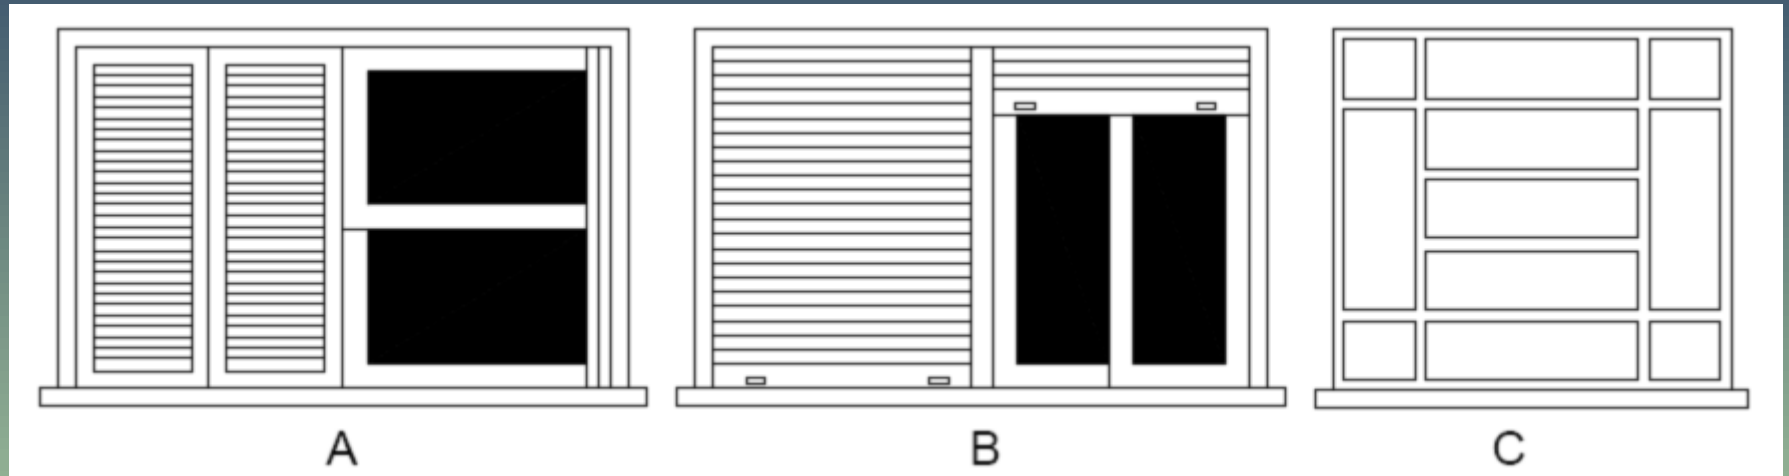

- A fachada não deve constar cotas como no corte, somente em alguns casos excepcionais.
- Indicar através de setas o tipo de material a ser empregado no revestimento, pintura...(se quiser).
- Desenhar as paredes mais próximas ao observador com traço grosso contínuo.
- Desenha as paredes ou partes mais distantes ao observador com traço médio e fino..
- Ao contrário do corte, na fachada é representada detalhes das portas e janelas com traço fino.

COMO REALIZAR A FACHADA?

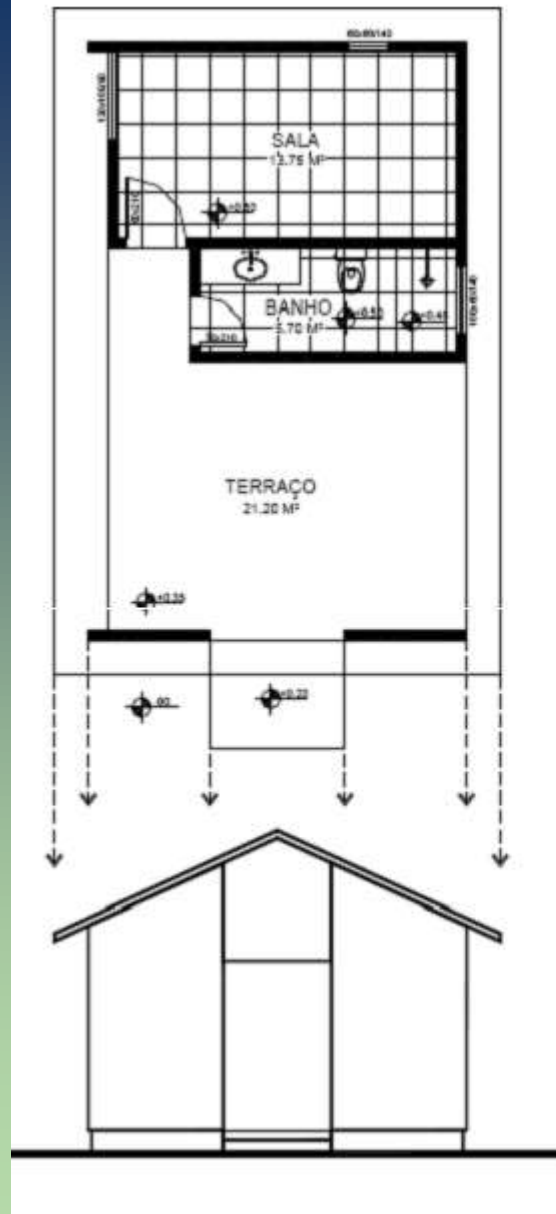

ALGUMAS OBSERVAÇÕES

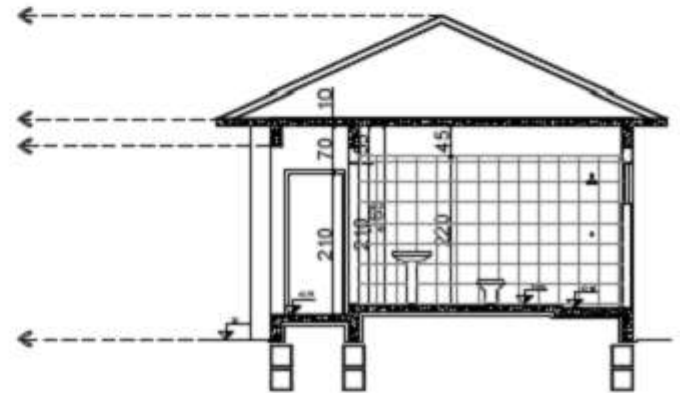

- A escala utilizada é normalmente 1:50
- A espessura do traço é o recurso utilizado para dar noção de profundidade dos planos no elemento representado
- É possível e aconselhável o enriquecimento da elevação/fachada com a utilização de vegetação, calungas, veículos, etc para dar a noção de escala e aproximar da realidade, desde que não impeçam a visualização de elementos de importância da construção
